ED Entered STN: 22 Oct 2004

AB The invention relates to a method of treating at least one symptom of a lower urinary tract disorder in a subject in need of treatment wherein the symptom is selected from the group consisting of urinary frequency, urinary urgency, urinary urge incontinence, nocturia and enuresis. The method comprises

administering to a subject in need of treatment a therapeutically effective amount of a compound that has 5-HT₃ receptor antagonist activity and NorAdrenaline Reuptake Inhibitor (NARI) activity. The invention further relates to a method of treating at least one symptom of a lower urinary tract disorder in a subject in need of treatment wherein the symptom is selected from the group consisting of urinary frequency, urinary urgency, urinary urge incontinence, nocturia and enuresis, comprising coadministering to said subject a first amount of a 5HT₃ antagonist and a second amount of a NARI, wherein the first and second amts. together comprise a therapeutically effective amount or are each present in a therapeutically effective amount Administration of MCI-225 to rat or cat models of overactive bladder caused a significant dose-dependent increase in bladder capacity.
